DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1-2,5 are rejected under 35 U.S.C. 102(b) as being anticipated by Vinciarelli et al. (U.S. patent # 6,208,531).

Vinciarelli et al. disclose the claimed invention an isolated type power supply (figure 7-8), including a modulating means, a transmitting means, a demodulating means, a switching means (column 3, line 15-60), including a transformer having primary and secondary (figure 7, item 10).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2838

4. Claims 3-4 and 6-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vinciarelli et al. (U.S. patent # 6,208,531) in combination with Batarseh et al. (U.S. Patent # 5,434,767).

Vinciarelli et al. disclose the claimed invention as explained in the claim 1, above, except the utilization of the technique for a isolated power supply, soft start, a clamped voltage, over voltage protection, PFC operation and fly-back converter. Batarseh et al teaches the utilization of the similar technique for isolated power supply and soft switching, over current protection and PFC operation. (figure 21 and column 2, line 5-55 and column 13, line 1-15). It would have been obvious one having an ordinary skill in the art at the time the invention was made to modify Vinciarelli et al.'s power supply by the technique taught by Batarseh et al. for the purpose of increase the efficiency of the power supply.
